**WiFi Configuration for Mac**

Internet-capable laptop – For Mac

1. Click Airport icon [icon] in the Status menu located on the upper left side of the desktop.
2. Click **Turn Airport On**.

3. Click Airport icon [icon] in Status menu. Available wireless network connections will appear. Select **myWiFi**.

4. Type **accessingwifi** in Password field. Tick the **Show password** and **Remember this network** check box. Click **OK**.

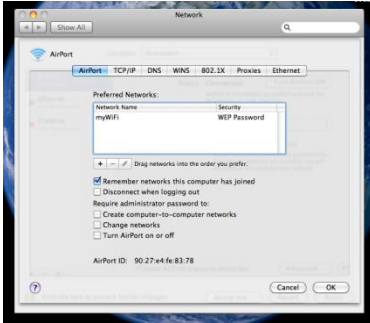

5. Click Airport icon [icon] in the Status menu. Click **Open Network Preferences**.
6. In the Network window, tick the **Ask to join new networks** check box. Click **Advanced**.

7. Lastly configure the proxy settings

    a. In the **Airport** tab, tick the **Remember networks this computer has joined** check box.

    b. Click **Proxies** tab. Tick the **Automatic Proxy Configuration** check box and type **http://wpad.dlsu.edu.ph** in URL field. Under Bypass proxy settings, type ***.dlsu.edu.ph**. Click **OK**.

    c. Click **Apply**.

    d. If your browser is Mozilla Firefox, follow these additional steps:

        1. Open **Mozilla Firefox**. Go to **Firefox** and click on **Preferences**.

        2. In the **Advanced** window, click **Advanced** tab. In the **Network** tab, click **Settings.**

        3. Tick the **Use system proxy settings** radio button. Click **OK**.
